

Keystrokes	Description

C-p	Up one line
C-n	Down one line
C-f	Forward one character
C-b	Backward one character
C-a	Beginning of line
C-e	End of line
C-v	Down one page
M-v	Up one page
M-f	Forward one word
M-b	Backward one word
M-<	Beginning of buffer
M->	End of buffer
C-g	Quit current operation

Keystrokes	Function	Description

C-x C-s	save-buffer	Save the current buffer to disk
C-x u	undo	Undo the last operation
C-x C-f	find-file	Open a file from disk
C-s	isearch-forward	Search forward for a string
C-r	isearch-backward	Search backward for a string
	replace-string	Search & replace for a string
	replace-regexp	Search & replace using regexp
C-h t	help-with-tutorial	Use the interactive tutorial
C-h x	describe-key	Display what a key sequence does
C-h a	apropos	Search help for string/regexp
C-h i	info	Read the Emacs documentation
C-x r m	bookmark-set	Set a bookmark. Useful in searches
C-x r b	bookmark-jump	Jump to a bookmark.

All command keystrokes in Emacs are actually just shortcuts to functions. You call those functions by typing `M-x function-name` & Enter. For example, the Emacs function which saves a buffer to disk is called *save-buffer*. By default it is also bound to `C-x C-s`. So, you can either use they shortcut to save the current buffer, or you could type *M-x save-buffer* and achieve the exact same result.
